

Shell Scripting Homework Task

Task: System Information Script

Create a shell script that:

- Prints the current date.
- Prints the hostname.
- Prints the username.
- Prints the disk usage.
- Prints the running processes.
- Uses variables to store and use data.
- Takes user input using `read -p`.
- Creates a directory using `mkdir`.
- Creates a file using `touch`.
- Stores the running processes information in the file using `>` output redirection.

Commands to Use

- `mkdir`
- `touch`
- `echo`
- `df`
- `ps`
- `read -p`
- Variables
- `>` output redirection

Submission

- Create a public GitHub repository.
- Push the completed shell script to the repository.
- [Readme.md](#) file with all commands output.
